Python Task

1. Function to Check Prime Number

Question:

Write a function to check whether a number is prime.

Call the Function

```
is_prime(7)
is_prime(10)
```

Sample Output

```
7 is Prime
10 is Not Prime
```

2. Function with Default Arguments

Question:

Create a function that calculates simple interest using default rate and time.

Call the Function

```
print(' Simple Interest =  ', simple_interest(1000))
print(' Simple Interest =  ', simple_interest(1000, 10, 3))
```

Sample Output

```
Simple Interest =100.0
Simple Interest   = 300.0
```

3. Function Using args

Question:

Write a function that returns the sum of any number of arguments.

Call the Function

```
print(total_sum(1, 2, 3))
print(total_sum(10, 20, 30, 40))
```

Sample Output

```
6
100
```

4. Function Using kwargs

Question:

Create a function that prints student details using keyword arguments.

Call the Function

```
student_details(name="Selva", age=25, course="Python")
```

Sample Output

```
name: Selva
age: 25
course: Python
```

5. Recursive Function (Factorial)

Question:

Write a recursive function to find factorial of a number.

Call the Function

```
print(factorial(5))
```

Sample Output

```
120
```

Frontend Task

1. Build a Responsive GST Calculator using HTML, external CSS, and external JavaScript
